

Figure 1 consists of four subplots arranged horizontally, each showing the probability distribution $P(x)$ for a different value of α . The subplots are labeled $\alpha = 0.1$, $\alpha = 0.2$, $\alpha = 0.3$, and $\alpha = 0.4$. The horizontal axis for all plots is x , ranging from 0 to 10. The vertical axis is $P(x)$, ranging from 0 to 1. As α increases, the distribution becomes more peaked and shifts slightly to the right.
